Confidence Intervals in R for Objects of Class `lm`

To calculate the confidence intervals for regression coefficients in R use the `confint` command.

```
# Find confidence intervals
CI <- confint(M1)
CI

##                2.5 %  97.5 %
## (Intercept)   24.091  47.379
## duration      -1.124   2.484
## condused     -10.652   9.263
## wheels         5.122  15.788
```
